Please read the following URL:

<http://vil.nai.com/vil/SystemHelpDocs/DisableSysRestore.htm>

The objective:

-----

- Turn off the System Restore function
- Reboot the PC
- Using your AV package, perform a full scan of all files on the platform and clean/delete  
infectors found
- Turn on the System Restore function
- Reboot the PC
- Create a new System Restore point.

If you have problems, it can be done manually....

Use the WinME floppy boot disk and boot from drive "A:"

When you get to a DOS prompt enter the following command

```
attrib -r -s -h c:\_RESTORE
rename c:\_RESTORE c:\RESTORE.old
```

Reboot the PC.

In Windows delete the folder; c:\RESTORE.old

Please report back your results.

Dave

| I know generic dialer is not a virus. However, it is a  
| program I want off my computer. The virus scanner won't  
| remove it. The Cab file is located in  
| c:\\_restore\archive. The Cabs are archived files and I  
| can't delete them. I have tried to use attrib to change  
| the archive but access denied. I have tried several  
| other ideas but I am striking out. I figure it is  
| something simple I over looked or just plain don't know

microsoft.public.security.virus: Re: fs66.cab/generic dialer

| how to do. Please help me get rid of these troublesome  
| programs.  
| Thanks
