I downloaded the file "xpsp1a_en_x86.exe" from the url:

http://download.microsoft.com/download/5/4/f/54f8bcf8-bb4d-4613-8ee7-db69d01735ed/xpsp1a_en_x86.exe

then opened up a command prompt and entered

xpsp1a_en_x86.exe -x to extract the files so i could

"slipstream" the files into a legal copy of XP. Well Norton

AV updated with 20040513-017-i32.exe version detected a

virus called "Bloodhound.HybridCOM". I was just wondering

why would i be getting a virus alert directly from a

Microsoft download?

File infected name: fpadmcgi.exe

Got the idea from this site:
