I have McAfee 8.0 and it has detected the W97M/Marker.gen virus in 2 files. The program will not remove the virus within Windows(freezes up). I downloaded the Scan zip file from McAfee as requested by their tech help,but when I try to run DOS Scan I either get the error message " 128 unknown error (code 5)" or the computer freezes up immediately after it checks memory for virus.The darn thing is driving me nuts,McAfee works great except with this one bug. For kicks I tried running Stinger and that didn't even detect the W97M/Marker.gen. Thanks for any advice with this.
