Per Mike Hall (MS-MVP):

>*Have you considered that it might be a problem with PC-Cillin?.. try their website for answers..*

No doubt the problem could be layed at PC-Cillin's doorstep... and that's where I put it. But that's largely a matter of semantics in my book.

Having subjected myself to TrendMicro's technical support once already (they're long on boiler plate, short on standard English...); having observed a few other undesireable behaviours in XP; and not really needing it (mainly, I wanted to try downloading the contents of my son-in-law's video camera just to play around with MS Movie); I opted for the easy way out and fell back to my last Windows 2000 Pro image.
