| Hi David

|

| As per my initial message; "...but the Trojan keeps the modem com port busy
| preventing me from connecting to the Net most of the time, and even when I
| can connect it stops me from downloading anything...". With this being an
| XP machine, a message keep appearing approx every 10 seconds saying the a
| program is trying to connect to the l33t.freeshellz.org domain. As a result
| when I try to connect I get a message saying the modem COM port is busy. I
| haven't been able to connect to the Net since I posted this message,
| therefore I can't update Sysclean, Ad-Aware, AntiVir or anything else! If I
| detach and reconnect the ADSL modem's USB cable, the trojan instantly tries
| to connect.

|

| Any ideas???

Shutdown as many applications as possible

It would also help for you to read – "How to perform a clean boot in Windows XP"

<http://support.microsoft.com/kb/310353>

Copy and Paste the following command line on the; Start --> Run location

```
%comspec% /c del %windir%\system32\drivers\etc\hosts
```

Dump the contents of the IE Temporary Internet Folder cache (TIF)

Start --> Settings --> Control Panel --> Internet Options --> Delete Files

Dump the contents of the Mozilla FireFox Cache { if you use FireFox }

Tools --> Options --> Privacy --> Cache --> Clear

Download CLEAN.EXE from the URL --

<http://www.ik-cs.com/programs/virttools/clean.exe>

It is a self-extracting ZIP file that contains the Kixtart Script Interpreter

{ <http://kixtart.org> Kixtart is CareWare } three batch files, two Kixtart scripts, two Link (.lnk) files and a PDF instruction file.

microsoft.public.security.virus: Re: Backdoor.Lateda.C

GETFILES.BAT --- For downloading (FTP) the files needed to run the McAfee Command Line Scanner. You may have to disable your FireWall or allow FTP.EXE to go through your FireWall to allow the FTP utility to download the needed files

CLEAN.BAT --- For running within Windows after running c:\mcafee\GetFiles.BAT. If you choose to scan again at a future date, run this batch file. It will automatically check the date of the McAfee DAT files and if it is a couple of days old, it will download (FTP) the latest signature files and install them before performing the scan.

DOSCLEAN.BAT --- For use on a Win9x/ME PC or on a Win2K/WinXP PC that is using FAT32 after you have booted from an Emergency Boot
