| Hi my first post so apols if I dont do this right. Have been using
| groups and have found them very helpful so far. Unitl now....

| Had Voyager 2090 wireless broadband. My computer was fine with no
| problems, was running AVG. Scanned a downloaded file and no virus
| found. Opened file and virus inside! Microsoft antipsyware picked it up
| and quaratined and i deleted it thinking nothing of it.

| Next my internet stops working, all my network connections go haywire
| (my bluetooth adaptor, lan ethernet fastport, and wireless. Tried my
| best to fix, reinstalled windows.

| Now if I try to reinstall the wireless modem the sytem doesnt
| acknoweldge it and i have to install my old modem. my ps2 ethernet
| works fine but if i try the modem with ethernet, the connections still
| has a big red cross beside it – as do all the other connections. I used
| to be able to pick up wireless connections in the local area.

| Im also sometimes having to taks manager quite often to stop my screen
| from freezing, sometimes my cpu is high when im not running much (and I
| know it shows it in reverse).

| Basically ive searched the groups and im getting conflicting answers.
| Ive scnned mmy computer, in safe mode, with avg, norton and many web
| based AV's. Im clean apparently. But i dont buy it. I have a feeling it
| has something to do with the RPC????? Because when I run AVG it get MBR
| error or something, sorry Im so out of my depth!

| And worse i dont know what virus i could even possibly have so i
| totally at a loss. At one time all my network connections were active
| and now the option to 'enable' cant even be chosen, only the 'disable'
| option.

| Please someone help! Sorry about the essay, heck maybe i should do my
| dissertation on a virus.

Re: Problems with RPC, networks and possible virus

| Chris (crying quietly in the corner)

If Microsoft anti spyware (soon to be Windows Defender) caught it then it is most likely not a virus but adware/spyware.

For non-viral malware...

Please download, install and update the following software...

* Ad-aware SE v1.06

<http://www.lavasoft.de/>

<http://www.lavasoftusa.com/>

* SpyBot Search and Destroy v1.4

<http://security.kolla.de/>

After the soft
