Hi Amit,

Let your antivirus (BitDefender) delete the detected file by running a full system scan. See:

<http://www.bitdefender.com/VIRUS-173651-en--Exploit.Win32.WMF-PFV.html>

If BitDefender will only block instead of delete, kindly review the settings in your BitDefender on how it will handle infected files then make sure that it is set to automatically delete infected file or prompt you on what to do when an infection is found.

If BitDefender will not delete the file, disable the other real-time security tools that is maybe stopping BitDefender to touch the infected file by deleting it. Or you can try using online scanner by Microsoft to see if it will detect and delete the said infection.

Live Safety by Microsoft is at <http://safety.live.com/site/en-US/default.htm>

Note: TrendMicro will detect that as TROJ_NASCENE.K. See

<http://www.trendmicro.com/vinfo/virusencyclo/default5.asp?VName=TROJ%5FNASCENE%2EK>

You may also try TrendMicro's Housecall to detect/delete the said infection by using the online scanner:

http://uk.trendmicro-europe.com/enterprise/products/housecall_launch.php

Regards,
Donna

Hi guys,

Re: Exploit.Win32.WMF-PFV

All of a sudden out of nowhere my Bitdefender Software says that is had detected and blocked this "virus" in "documents and settings\ IE5 content".

However, whenever i try to run cache cleaner or to clear my temp internet files etc through internet options in the control panel it brings up the same

alert. Each time saying that Bitdefender had blocked it and that my computer

Re: Exploit.Win32.WMF-PFV

has not been infected.

a-Squared scan also detected it as malicious and supposedly deleted it,
but
it still shows up on the next scan.

Am i being worried over nothing? or is there something wrong?

Any help would be much appreciated on how to remove/fix this problem once
and for all. I'm running Windows XP with service pack 2.

Thanks ,

Amit
