Don't know what to do about getting rid of the virus you have apart from uninstaling MSN Messenger, but I take it you have set in the messenger options to use AVG to scan all files?

Alternatively ditch MSN Messenger and use Trillian [www.ceruleanstudios.com](http://www.ceruleanstudios.com), I've been using it for the last year or so with no problems. Trillian can also do Yahoo and AIM at the same time.

Hi there,

I have MSN Live Messenger 8.0 and the individual user windows with user names on them keep flashing on. Also, the MSN window itself expands fully without any prompt and so far one of the contacts has gotten the infection from me.

I've run AVG and Hijack This, and SpyBot, but it keeps coming back....

What is it and how do I get rid of it?

Thanks,

Gordon
