Unified Threat Management is not the only one who blocks me. The troll David Lipmann probably with the help of others flooded them (the people who supply the database that they use) with emails about me after failing to shut down my website. I managed to remove my site from the ones I know about. As far as back doors go all of my files are batch files which you can open in notepad and see for yourself. My Remove-it software is compiled but only to prevent the real thieves that I've posted about from stealing it but after it is installed you can still edit the main file in notepad. You can think what you want but my daily influx of thank you emails has not decreased in three years.

Well, I do not care to get into the middle of your little urinating contest, and I have seen your posts as well as others in a Google search. I do not care to deal with people who cannot seem to carry on an intelligent debate without resorting to name calling and profanity, of which you and others are guilty.

Your own reactions make me question your integrity. My firewall UTM even flagged your URL as malware. Sorry, but I think I'll pass. I, too, wonder about back doors.

Gregg

You can read and believe what you want about me in these NG it has been going on for years. I am not the person they say I am, I am not the person they think I am. Anyone with any common sense would know that if everything they say were true I would not be here. The unbiased real truth about me and the quality of the tools I make can be found here Check my

Re: Antivirus 2008/2009

feedback and see what others have said about me and my tools.
<http://pcbutts1-therealtruth.blogspot.com/> I also tell everyone who sends feedback or emails me directly not to comment in the NG because they will be ridiculed by the jealous others in this group. One more thing. They say I am a thief but they can't seem to find what they say I stole and post proof (because there is none) and nobody criticizes my tools because they work.

Be aware that "The Real Truth MVP" is not a Microsoft MVP. He has a very poor reputation with many well respected people in the security community.

I know that SAVCE and McAfee antivirus do not touch spyware/malware as noted in my post, but as I said, Trend's Internet

Re: Antivirus 2008/2009

Security 2008 software is supposed to block and/or clean it.

I'll look at your tools.

Thank you!

Gregg Hill

Antivirus
and
Malware
are two
different
things. You
are quoting
antivirus
that does
not detect or
remove
Malware.
As far as
prevention
then you
can try the
paid version
of MBAM
<http://www.malwarebytes.org/mbam.php>
I don't
know if it
will work
on 2009. If
you want to
just remove
it then use
my
Remove-it
software it
will clean
both 2008
and 2009.
Download it
here

Hello!

I
just
ran
into
my
third
new
client
with
"Antivirus
2008"
or
"Antivirus
2009"
rogue
malware
infection
on
an
XP
computer.

Re: Antivirus 2008/2009

The
first
to
get
hit
had
Symantec
Antivirus
Corporate
Edition
9.x
on
it,
the
second
had
McAfee
that
came
with
the
computer,
the
third
has
Dell's
Trend
Micro
PC-Cillin
2008.
All
three
had
the
latest
antivirus
definitions.
I
can
see
the
SAVCE
system
and
McAfee
getting
hit,
as
neither
blocks
malware/spyware,

Re: Antivirus 2008/2009

but
Trend
PC-Cillin
Internet
Security
2008
is
supposed
to
block
it.

What
is
its
attack
vector?

Does
anyone
know
of
consumer
AV
software
that
actually
prevents
this
thing
from
installing?

Thank
you!

Gregg
Hill
