Use your screen saver enter a password, then set the time for 0 minutes, as soon as you boot, the screen saver will come up and any activity will require the password. alternately, you need w2k , much better security.

You can also set the

Bios up for boot up password, although it's easy to bypass just remove the MB battery, if they are not computer savy and of course your Bios allows this.

What Operating system are you using?? and how old is your computer?
