Maybe U bouth should download Microsoft Data Access Components Checker Tool and check what version of MDAC you have and then download the right security update.

Clip-clip>

The Component Checker tool is designed to help you determine installed version information and diagnose installation issues with the Microsoft Data Access Components (MDAC). Component Checker runs on the following operating systems: Microsoft Windows 95, Windows 98, Windows NT 4.0, Windows 2000 and Windows XP.

MDAC is installed with numerous Microsoft products and also can be redistributed using the redistribution program (mdac_typ.exe) accessible through the links on the rest of this page.

Component Checker is a customizable tool that performs the following tasks:

Identifies the current MDAC installation on a computer.

Creates a series of reports about the files identified for the current MDAC installation.

Removes the current MDAC installation after listing .dll conflicts and identifying programs that reference a given .dll.
