Kris asks a question to do with PCs, Super\_Geek dives in and tries to help:

>I've noticed recently that when I'm online my mouse will  
>suddenly shift to the left. This seems to happen soon  
>after I log on and only happens when I online. This  
>happens whether or not I'm holding down the left click  
>button. It's almost as if someone has access to my mouse  
>and is checking to see if they have control.

Could it be that you have 'snap to default button' in mouse properties?
