For some reason, I have recently been unable to access my hotmail account on my PC. I have broadband access which is firewalled via XP's own firewall. When I attempt to log in I get to the following message:

The page cannot be displayed

The page you are looking for is currently unavailable. The Web site might be experiencing technical difficulties, or you may need to adjust your browser settings.

I then try all the suggestions which follow but nothing changes.

I'd be grateful for any help from anyone. I can access my account from my laptop and have compared the internet settings which appear to be identical on both machines.

Thanks
