Windows Me itself or Windows Explorer might be dialing. However it could be any other program as well.

Clean your PC by running a good AV with latest data. Then Download and install free ZoneAlarm firewall from Zone Labs. This firewall program prompts you and tells you which program is connecting to Internet and seeks permission to allow it to connect or not. This way you will know which program tries to connect.

Even on dialup, I recommend firewall if you are remaining online for prolonged periods. Just a safety precaution and useful too, looking at the entry attempts stats.
