Hi, Ive got both over.exe and pup.exe. Im reading the forum and its helping!

I also have some other files that were d/loaded at the same time as over+pup:

bdl14206.exe
esktopd.exe
indowshellsw.exe

i think esktopd and indowshellw are re-named trojans(over and pup more than likley)

The popup im getting is sending me to www.achtungachtung.com which turns out to be under construction(although i cant trust this as my Pc is not clean at the moment)

should i delete all the prefetch connections to these parasites?

Any help appreciated.

Chris
