hi!

Firstly, thank you for the reply to my message.

I have Microsoft Windows XP Home Edition, Version 2002, Service Pack 1,
Computer: AMD Athlon (tm) Processor, 1.24. GHz, 256 MB of RAM and someone
else is logged onto my computer although I have installed anti virus and put
a password which someone else is automatically discovering. I had changed the
password but it was unsuccessfully. For this reason, I wanted to ask you how
can I remove someone who is logged onto my computer.

Thank you
