I have had numerous people try to send me audio files in midi format over windows messenger however apparently for some strange reason they are on the bad file list.

does anyone know how to get certain files off the list or if it is editable?

i have tried unchecking boxes in outlook express security... but i dont see what that has to do with windows messenger

also i couldn't install my apple ipod drivers and itunes on SP2 i had to uninstall SP2 install ipod and then reinstall SP2

its a joke!!

anyone help with the bad file list problem?
