I'm trying to apply MS04-28. We use Office XP and outlook2003. I know we have to apply SP3 for Office XP before MS04-28 patch. When I did it, Office XP CD was required. I have to make our company's end users apply this patch within next week, I really want to know how to apply SP3 without CD. I found an article but we installed Office XP with "full install" then set up outlook2003. So this article say I cannot do this method. Is there any method do this?

We also installed Japanese MUI for windows XP and Office XP and outlook2003.
