View Which Hot Fixes Have Been Installed. Registry, Belarc Advisor, Qfecheck and SPCheck.

Start | Run | Type: regedit | OK
Navigate to >>

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\HotFix

Key contains information about which Hot fix's have been installed.

=====

Belarc Advisor Also shows Updates

Belarc Advisor – Free Personal PC Audit
http://www.belarc.com/free_download.html

===

Download, install and run Qfecheck.exe

Qfecheck will show if all updates have been installed properly or not.

Among other things...[[This tool helps customers who thought they had properly installed anupdate, but had not, and are now experiencing a problem.]]

Windows XP Patch: Qfecheck.exe Verifies the Installation of Windows XP Hotfixes
<http://tinyurl.com/aiz4>

Qfecheck.exe Verifies the Installation of Windows 2000 and Windows XP Hotfixes
<http://support.microsoft.com/default.aspx?scid=kb:en-us:282784>

===

ServicePack Level diagnostic tool (SPCheck.exe).

Re: tool to list all patches ?

microsoft.public.security: Re: tool to list all patches ?

SPCheck.exe is on the XP CD in the \SUPPORT\TOOLS folder in the SUPTOOLS.MSI package.

To install Windows XP Support Tools, run setup.exe located in the \support\tools directory on the Windows XP CD.

You can use the SPCheck tool to determine the service pack level of installed components on computers that are running either Windows NT Server 4.0, Windows 2000 Server, Windows XP, or Windows Server 2003. The SPCheck tool generates a report that lists the origin of each file for each installed component.

Overview of the SPVerify Tool
