I am receing the following error Event ID 7 "The kerberos subsystem encountered a PAC verification failure. I found article 88326 regarding this issue and ran the steps that they recommend. All services are fine with the exception of KDCSVC. When I enter the command Sc query KDCSVC I reveive the following message:

OpenService Failed 1060:

The specified service does not exist as an installed service

I could not find any information regarding this issue. What issues does this cause and how do you go about resolving this error message.
