Hi,

I have the following situation:

- 1 administrator who has material responsibility
- 2 administrators who act as assistants

What I would like to do is:

Create 2 accounts: Admin2 and Admin3

give them all rights except:

- having the ability to change the password of Administrator
- having the ability to change own rights

Further Remote Administration through Terminal Services for Remote Administration should be limited the following way:

Console: only Administrator (direct console or mstsc.exe /console)
Terminal Session (Remote Administration): Administrator, Admin2 or Admin3

Is it possible to configure the above schema

- a) with Active Directory
- b) without Active Directory

The server where I want to create this security model is a standalone Windows Server 2003 R2 SP2 Standart Edition with Remote Desktop for Administration enabled.

Thanks in advance

Best regards

Alexej Buchholz
