Date: May 22, 2002

Topic: SQL Server Security Architecture and Best Practices

Time: 12:00 p.m. – 1:00 p.m. (Pacific Time)

Abstract: Whether your SQL databases are accessed from the Internet or used internally, security is at the top of everyone's list these days. Join this chat and talk with SQL Server security professionals to determine the best ways to audit and lock down your SQL Server databases. Among the topics discussed will be SQL Server security internals, authentication, object permissions and ownership chains, use of roles, Active Directory integration, and SQL Server security best practices.

Hosts:

Girish Chander, Microsoft, Program Manager for Security in SQL Server

Tanmoy Dutta, Microsoft, SQL Security Dev Lead

James Hamilton, Microsoft, SQL Server Architect

Kevin McDonnell, Microsoft, Technical Lead, Microsoft SQL Server Support
