| You are right. The reason that we need to grant
| permissions to a database user to two tables in tempdb is
| because of a ASP.NET application. The user who needs to
| access that application needs to have the select,
| delete..etc permissions on tempdb. We are not using the
| guest account for this due to the security concerns.

| You have really been a great help to me and I want to
| thank you for all your help.

| Jason
