Hi Arvind!

After we installed the patch we had problems with queries of this nature
It through errors like:

Microsoft OLE DB Provider for SQL Server error '80040e14'

SqlDumpExceptionHandler: Process 51 generated fatal exception c0000005
EXCEPTION_ACCESS_VIOLATION. SQL Server is terminating this process.

Here is a sample query. I have changed the fieldnames, tablenamees to keep
things private.

```
Select D.EID, D.ENAME, P.PID, d.TID From (Select E.EID, E.ENAME, te.TID From  
MyETable E, MYTETable TE Where TE.EID = E.EID And TE.TID = " &  
Trim(tRs.Fields(0)) & ") D  
Left Outer Join (SELECT * FROM MYPETable WHERE PID = " & projectID & ") P ON  
D.EID = P.EID AND d.TID = p.TID
```

Queries like this had been running since May. Once we broke these queries
up we did not get the errors.

Thanks.
