I think if you use USE in a stored procedure, you need to execute the entire statement dynamically with an EXEC – e.g. EXEC('USE <SomeDatabase> EXEC sp_grantdbaccess...')
But...If I create a stored procedure in Northwinds that executes:

```
exec pubs.dbo.sp_grantdbaccess @SomeUser
```

it works fine and creates the user in pubs when executed from Northwinds. Could you post the specific error you get when you try the same thing?
