Just verified via Win2000 sp3 and .net sdk 1.0 sp1 that .net SDK/Slammer patch installs with no problems.

Now, hfnetchk reports all patches A-OK :-)

However, another problem associated with this patch seems to have cropped up:

- installed the patch below as admin

- now, logged in as a power user, the system tray SQL Server Service Manager is inactive (previously, it had a red block, indicating that it was turned off, which I could turn on, as power user).

Now, after current patch, it is completely inaccessible, and looks like this (small embedded

Previously, I could enable or disable SQL for .net SDK through this tray-icon.

Logged in as admin, it looks normal with:

```
Server: <computername>\NETSDK Service: SQLServer
```

Any ideas?

Thanks,

- Mitch
