You should probably call support and get an expert's opinion, but if it were me, I'd probably try updating to MDAC 2.7 SP1 manually, rebooting the computer, and trying to install SP3 again. :-) Sqlredis.exe does this and is in the x86\other directory where you expanded the service pack download.

DSQUERY is indeed a string value.

Hope this helps!

Stephen Dybing, Microsoft

>

> *Additionally, When I apply the patch it asks me to choose an instance if SQL. I only have one instance of SQL installed, however it is named. When I get to this screen in the patch intall, I do not have the option to change it from default to my named instance. The option is greyed-out. Is this ok, or should I be able to change it?*
