Hi everyone.

I have some trouble to make some DTS package on a SQL server. It can be a 2000 or a 7.0 I've got the same trouble. When I try to make or design a DTS package, it appear this error :

error source: Microsoft Data Transformation services (DTS)
package
error description : Accès refusé

in english "Accès refusé" mean "access refuse"

I don't know why it's make this error on a win NT station but not on a win 2000 station... I've try with a lot of win NT station and it's make all the same error. But if i try with other computer with the os of win 2000, there is no error. why?

In addition, I try directly on the server that have the sql server 7.0 with the enterprise manager (7.0)(win NT workstation) and it's make the same error.

Can someone can help me?

excuse me for my english... my first language it's french

Dave
