I have the same error

I took a look at the .sql files that were stored as part of the package using winrar and found this snippet of code.

```
if object_id('sp_setuserbylogin','X') IS NOT NULL
  exec sp_dropextendedproc 'sp_setuserbylogin'
execute sp_addextendedproc 'sp_setuserbylogin','(server internal)'
go
grant execute on sp_setuserbylogin to public
go
exec sp_MS_marksystemobject 'sp_setuserbylogin'
go
```

After I ran that myself in master, the problem went away. I'm not sure why it didn't run during the install which seemed to go fine.
