Hi Yoshihiro,

Thanks for your feedback. The Transact-SQL programming language provides DBCC statements that act as Database Console Commands for Microsoft SQL Server 2000. These statements check the physical and logical consistency of a database.

I know that if we can find the place where the permissions of each DBCC command stored, we can update the table directly to change the permissions. However, as I understand, that they are different from the objects in the database. I am unable to find the place stored the permissions of each DBCC command so that it is not easily to list the permissions of each DBCC command.

If you just want to view the permission of the DBCC command, you can search the DBCC command in the SQL Server Books Online and find the permissions under the "Permissions" subtopic for this DBCC command.

Please feel free to post in the group if this solves your problem or if you would like further assistance.

Regards,

Michael Shao
