Hi

I have system stored procedures in a database starting with

dt\_adduserobject\_vcs

dt\_checkinobject\_u

dt\_displayoerror\_u

dt\_droppropertiesbyid

...

...

...

somehow instead of showing the owner as dbo and type as system in Enterprise Manager it displays owner as user and type as user, I can also view the stored procedures and can modify them which is not the case in other database.

any clue...you can find the system stored procedure in all databases.
