Add them to the db_ddladmin role.

news:#9017Z7zDHA.2116@TK2MSFTNGP11.phx.gbl...

I have a group of developers that I want to allow permissions to
create/alter table structures in a particular database. I don't want to give
them rights to alter the database itself just rights to alter the structures
inside the database. I run the following command in the query analyzer
connected to the development database:

```
GRANT CREATE TABLE TO DevAdmin
```

DevAdmin is a Windows 2K Group containing the developers. We are running SQL
Server 2000.

When I have one of the developers open Enterprise Manager and check the
permissions on a table in the development database the design option is
still grayed out. How can I accomplish allowing the developers to change the
structure of tables, views, etc...without giving them db_owner rights and
without allowing them to alter the database itself?

Thanks.

Nancy
