Are you creating a Web based application that is connecting to SQL or a Standalone Console type application?

Disabling the Network Protocols will only allow clients to use Shared Memory.

Try enabling the other protocols Named Pipes and TCP to see if the problem persists. Here's an article that walks you thru the process.

827204 BUG: You may not be able to connect to an instance of Microsoft SQL
<http://support.microsoft.com/?id=827204>

Thanks,

Kevin McDonnell
