Hi Boon,

Thanks for your post.

>From your descriptions, I understood that you would like to log C2 Audit.
Have I understood you? Correct me if I was wrong.

However, I am not sure how do you define "every thing". Do you mean auditing all logins no matter it is successfully or failed? If so, here are four options for different audit level

None --- causes no auditing to be performed.

Success --- causes only successful login attempts to be audited.

Failure --- causes only failed login attempts to be audited.

All --- causes successful and failed login attempts to be audited.

Take the following steps in SQL Enterprise Manager to set the appropriate Audit Level you wanted.

1. Expand a server group.
2. Right-click a server, and then click Properties.
3. Click the Security tab.
4. Under Authentication, click SQL Server and Windows.
5. Under Audit level, select the level at which user accesses to SQL Server.

If you want to use SQL Server Profiler to auditing SQL Server activity, See topic "Auditing SQL Server Activity" in SQL Server BooksOnline and here are some KB on the best practise for using SQL Profiler for your reference
