Hi,,

By default, the guest login doesn't exist in newly created databases, but you can add it or delete it from all databases except master and tempdb. Most users access master and tempdb as guests and because of this, you can't remove the guest account from these databases. Don't worry—a guest has limited permissions and privileges in master and tempdb.

There is a MS article mentioning this:–

<http://www.microsoft.com/technet/prodtechnol/sql/2000/books/c05ppcsq.msp>

See the topic Working with the Guest Login

Thanks

Hari
