A problem occurred while attempting to logon as the Windows user 'SQLAgentCmdExec': The parameter is incorrect. The step failed.

There are a few jobs that developers create and they run under there accounts, I do not want to give them sysadmin access, but they need permissions to CmdExec. I enabled the SQL Agent Proxy account yet the above error appears in the job after it runs. The account that is running the sql agent service is a server administrator under SQL 2000.

Any ideas? Thanks,

– Gabe
