Guo,

Thanks for your help.

I setup "All" for Audit level in security, after that, in application view, I restart SQL Server, I found user colum is "N/A" or "System". Any thing I did not do?

Thanks

Kai

>

> *Audit on both successful and failed login attempts. You can record attempted user accesses as well as other SQL Server log information, and enable auditing for both security modes, and you can record information on both trusted and nontrusted connections. Log records for these events appear in the Windows application log, the SQL Server error log, or both, depending on how you configure logging for your SQL Server.*
