Is this user using Windows authentication and if so is the user and Administrator on the box? If so, deny won't work.

using Sql Server 2005 Express

I have created a new user and added them to the db_datareader role.

This gives the user access to SELECT from my tables. As a test, I wanted to deny them access to a certain table, so I went into the properties->permissions for the table and checked the 'Deny' option on the 'SELECT' option in the 'Explicit permissions for <username>'

The user is still allowed to perform a SELECT on the table. What am I missing? I haven't ever modified permissions before, all my apps before were for 1 user.

Thanks for reading,
Steve
