I'm not sure why you posted this question to security but are you sure the app is hanging on the Item accessor? A more common issue is that is that the Read method is hanging due to back end database blocking. Run sp\_who while to problem is occurring to identify blocked/blocking processes.

Hope this helps.

for some reason when i deploy my C# application on windows 2003  
occasionaly  
rdr[0].ToString() hangs where rdr is a  
System.Data.SqlClient.SqlDataReader.  
Is there a fix for this? is my visual studio.net out dated?
