The necessary permissions, rights for service accounts are listed in the following article:
How to change the SQL Server or SQL Server Agent service account without using SQL Enterprise Manager in SQL Server 2000 or SQL Server Management Studio in SQL Server 2005
<http://support.microsoft.com/?id=283811>

Hello,

thanks for the good hint. Ok, I have changed nothing on ADhelper but what's about my origin problem around the inability to launch any service account with domain user accounts? How can I reestablish the service accounts? Are there policies / Security settings which can be reset by a tool? What can I check on my side to scope the error? (something like a check list?)

Thanks
Stephan.
