"It cannot run" doesn't give us much to go on – the errors or problems are???? If you aren't already doing so, you need to use the command line add-on for WinZip. You can download it from:

<http://www.winzip.com/wzcline.htm>

Not sure if it changed recently but it used to need admin rights by the account executing the command so the service account would need admin rights.

Hi ,

I create a batch file to run the zip the files. It works fine when I run manually. But if I put into DTS package and shedule it , it cannot be run. Do I need to pass any user and password paramater into the DTS package ?
