You can ignore the CREDENTIAL clause in CREATE LOGIN. That is currently unused.

Thanks

HI ,

WHAT credential must we specify in the create login statement, also i believe we can alter credentials too right? Either way please tell me what credential we must specify to allow SQL server to use stored procedure to write a file on the server machine folder.The sql server is running under a user account who is an administrator

You can check CREDENTIAL clause in CREATE LOGIN statement.

"Vaibhav Goel"?? ??? ??:

Hi ,

We have a product that is currently working with dotnet 1.1 and SQL 2000 &

Re: SQL 2005 user not having permissions to write a file in a fold

MSDE , now we are upgrading it for SQL2005 and SQL  
Express and  
framework 2.0,  
we use a stored procedure that reads a binary data from the  
database  
and  
writes it into a file on the file system, this was working  
perfect in  
sql  
2000 but in 2005 it is bombing saying access denied.The sql  
user is of  
type  
sysadmin, there seems to be some permission we need to  
provide or  
something.Please help.It especially seems to give issues in  
SQL express  
please guide as to why this problem is happening and how do  
we fix it,  
the  
stored procedure works perfectly for MSDE and SQL  
SERVER 2000  
Best Regards,  
Niketa
