Hello,

I want to create a table that has denies all select, update, delete access for all users except the owner of the table. This isn't really hard to do, however what I'm trying to accomplish is that access is also denied from the SQL Server Manager, meaning the dbo must also be denied.

Is this possible? I've tried to deny select access for the object on the dbo, however this doesn't do anything...

Thanks in advance for any answers.

Best regards,

.
