Hi,

I am using SQLEXPRESS running locally on my machine and am trying to create a database (AdventureWorks) for an example that I am using. What complicates this a bit is that this example is using NAnt. The local.properties.xml file contains the following:

```
<?xml version="1.0"?>
<properties>
<property name="sqlToolsFolder" value="C:\Program Files\Microsoft SQL
Server\90\Tools\Binn"/>
<property name="osql.ConnectionString" value="-E"/>
<property name="initial.catalog" value="AdventureWorks"/>
<property name="config.ConnectionString" value="data
source=SQLEXPRESS;Integrated Security=SSPI;Initial
Catalog=${initial.catalog}"/> <property name="database.path"
value="C:\root\development\databases" />
<property name="osql.exe" value="{sqlToolsFolder}\osql.exe" />
</properties>
```

When I open the Enterprise Manager and run the script for attach.sql the database is created fine.

when I run the "build builddb" I get the following error:

```
NAnt 0.85 (Build 0.85.2139.0; nightly; 11/9/2005)
Copyright (C) 2001-2005 Gerry Shaw
http://nant.sourceforge.net
```

```
Buildfile: file:///C:/root/development/playground/adventureworks/avworks.build
Target framework: Microsoft .NET Framework 2.0
Target(s) specified: builddb
```

```
[echo] Loading local.properties.xml
```

```
builddb:
```

```
exec.sql.template:
```

## Newbie needs help

convert.template:

```
[copy] Copying 1 file to
'C:\root\development\playground\adventureworks\sql
\attach.sql'.
[exec] Msg 1813, Level 16, State 2, Server OHBOCXX99RMRVK, Line 1
[exec] Could not open new database 'AdventureWorks'. CREATE DATABASE is
aborted.
[exec] Msg 602, Level 21, State 50, Server OHBOCXX99RMRVK, Line 1
[exec] Could not find row in sysindexes for database ID 13, object ID
1, in
dex ID 1.
[exec] Run DBCC CHECKTABLE on sysindexes.
```

**BUILD FAILED**

```
C:\root\development\playground\adventureworks\avworks.build(60,10):
External Program Failed: C:\Program Files\Microsoft SQL
Server\90\Tools\Binn\osq
l.exe (return code was 1)
```

Total time: 1.8 seconds.

When I installed SQLEXPRESS, I installed it using Windows Authentication and I would think that Integrated Security would work. I'll bet I'm doing something silly, but I've tried to figure it out with no luck.

thanks in advance!

Bill
