Microsoft OLE DB Provider for ODBC Drivers error '80040e14'

[Microsoft][ODBC SQL Server Driver][SQL Server]Invalid column name 'ACTIVE'.

Both of these databases have this column in the same exact table, why isn't this working though..By the way, any columns that weren't added to the copied database, and that were there from the copy, the asp pages work fine on, just the new columns i've added to both db's, its not working. I already checked the individual column security, and the user settings are the same as the originals dbase columns security settings, Please help?

Is it possible that the new database is case-sensitive and the original one is not?

Dump out the table definitions from each and compare them.
