A database is off line, in standby, suspect, recovering, etc. Check the statuses of your databases. Did you fully restore all of them or is one of the restored databases still recovering?

Hi all,

I restored 4 databases onto another SQL server and added sql logins. When I click on a login under Security I get this message?

"One or more databases are inaccessible and will not be displayed in the database access tab"

I don't understand this message and couldn't find anything on it.

thanks
