Chris

Any errors in event viewer, sql server log file?

"Chris Ford" <ChrisFord@xxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:5DD31C06-D0ED-4DC1-9768-A072FBBBBA1B@xxxxxxxxxxxxxxxxxxxx

Uri

Thanks for replying so quickly.

Yes for the purposes of testing the connection, I've assigned the developer

(an ordinary domain user) public access to Northwind.

I've also tried making them a member of the Sysadmin Server role to no effect.

The same user can connect to another SQL server using Windows Authentication

(SQL 2000 Workgroup Ed SP4 running on Windows 2003 SP1).

I've just tried the same user from a different PC and he can log in from there too (that one runs Windows 2000 Professional SP4).

Do you grant access to SQL Server,for login? What is a default database did you assign to him?
