I don't have a case-sensitive server handy to test this on, but perhaps the property names are case-sensitive in a case-sensitive instance. You might try specifying the proper case names documented in the Books Online:

```
SELECT
SERVERPROPERTY('ProductVersion'),
SERVERPROPERTY ('ProductLevel'),
SERVERPROPERTY (Edition')
```

Hope this helps.

Hi,

How to chekc which SP I've installed on my SQL Server 2005..?

Tried the following query:

```
SELECT SERVERPROPERTY('productversion'), SERVERPROPERTY ('productlevel'),
SERVERPROPERTY ('edition')
```

Doesn't give any info.

Thanks

R
