Hi

I got a Problem with a SP procedure execution which runs perfectly fine in SQL 2000 within 1 sec and same query when i run on SQL 2005 it takes 3 min 45 sec +- 2 seconds

I got SQL 2000 std and SQL 2005 std RTM running on same machine on a Windows server 2003 std editon ,
I have a staging envirnoment and its the same there takes much longer time in SQL 2005

I have couple of more queries which takes longer in SQL 2005 than SQL 2000

all SPs are taking parameters and executes a select statement

Did the following :

Update stats,rebuilt index ,CL level changed to 80/90 ,did index defrag but no luck

ANy help is highly appreciated

Thanks
Shree
