Tanzen (aaron.nasby@xxxxxxxxxx) writes:

I am using an MS Access 2003 database with an ODBC connection to the tables to perform the same delete queries, but they fail. The error when I run the delete query from MS Access 2003 is:

ODBC --call failed.

[Microsoft][ODBC SQL Server Driver][SQL Server] Select permission denied on column 'password' of object 'tblPasswordsforDirector', database 'Passwords_IT', owner 'dbo'. (#230) [Microsoft][ODBC SQL Server Driver][SQL server]SELECT permission denied on column 'UserName' of object 'tblPasswordsforDirector', database 'Passwords_IT', owner 'dbo'. (#230)

I'm assuming I need to post this to an Access forum.

Yes, they may be more helpful. But you could use SQL Server profiler to see what statements that Access is submitting. Maybe it's better to use a stored procedure instead. But the Access folks may know how tell Access to do the right thing.
